
Recompute wait estimate
Stage running under 15 minutes
No
Track has an open panel
No
Suppress ETA, raise ops alert to assign a panel
Yes
Queue position 3 or less
Yes
Show: you are next, stay nearby
No
service_ewma = 0.3 x last duration + 0.7 x previous
eta = ceil(position / active_panels) x service_ewma
Add remaining time on the in-flight interview
Render as a RANGE, never a single number
v1 ERROR: clamp displayed the OLD number when panels closed
knowingly false, now always explained
New estimate higher than the last shown
No
Display the new range
Yes
Why did it rise
service time rose materially
Show range plus: interviews running longer than expected
Queue position worsened
Show range plus: a priority applicant was called ahead
active_panels dropped
Show range plus: two panels are on break, about 15 min longer
Yes
Suppress: we will call you shortly
Connection lost
Keep the last number visible with an explicit timestamp, never a bare spinner
